Rafael Delwart
Robotics Engineer

About Me

I am a Robotics Engineering graduate from UCSC, born and raised in San Francisco, with hands-on experience in microelectronics, programming microcontrollers, and automating complex systems. I am proficient in Kicad, C++, and SolidWorks, capable of simulating and developing real-world applications. I am a fast learner with practical expertise in leading a team, software development, electrical systems, and CAD design.

Major Projects

Wet-Dry Cycler for RNA Production
Recruited and led a team to design and build an automated system to simulate early Earth conditions for non-enzymatic RNA synthesis, supporting origins-of-life research in collaboration with Dr. David Deamer.

3D Tracking Using an IMU for Rock Climbing
Developed an inertial measurement unit (IMU)-based tracking system for analyzing climber movement, improving performance insights, and motion visualization.

Mechatronics Competition (2nd Place)
Led the development of a high-performance autonomous robotic system, integrating microcontrollers, sensors, and real-time feedback for competitive mechatronics tasks.

Detailed descriptions and documentation available at: ramfi-d.github.io/Website/

Most Relevant Courses

Computer Science:	Electrical & Mech. Engineering:	Math & Physics:
Logic Design	Project for Professor Deamer	Statics & Mechanics
Data Structures	Applied Feedback Control	Calculus I
Probability & Statistics	Feedback Control Systems	Calculus II
Assembly	Analog Electronics	Linear Algebra
Discrete Math	Sensors & Sensing	Vector Calculus
Python	Embedded Systems	Physics I
Programming Abstractions	Mechatronics	Physics III
C Programming	Signals & Systems	Mathematical Methods II
	Circuits	Kinematics

Work Experience

UCSC, Santa Cruz, CA
Undergraduate Tutor — ECE167: Sensors and Sensing
Supervisor: Professor Collen Josephson (cjosephson@ucsc.edu)

Led tri-weekly lab sessions for 100 plus students on sensor technologies and data processing. Covered sensing principles, calibration, signal filtering, ADC, and data acquisition. Guided students in practical lab applications using C programming and lab equipment.

Skills

Programming: Python, Kicad, C, C++, Verilog, MATLAB, Assembly, HTML, CSS, Latex.
Math & Physics: Strong background in advanced concepts.
Systems Modeling: Kinematics, dynamics, SolidWorks, OnShape.
Electronics: LTSpice, Circuit design, analysis, analog/digital systems.
Projects: Microcontrollers, sensors, 3D prototyping, technical documentation.
Languages: Fluent in French and English.

Education

University of California, Santa Cruz (UCSC) — *Dean's Honor List (4 times)*
Robotics Engineering, Minor in Electrical Engineering — *Major GPA: 3.74*
Sept 2020 - June 2025 — *Honors Graduate in both fields*
